Cleveland Clinic Innovations

Antibody Therapeutic for Ovarian Cancer

Vincent Tuohy Laboratory – Cleveland Clinic Lerner Research Institute

PRODUCT
Monoclonal antibody targeting human AMHR2-ED.

INDICATION
Epithelial ovarian carcinoma.

VALUE PROPOSITION
- High affinity; Humanized.
- AMHR2 target present in vast majority of ovarian cancers.
- Can be used as a naked antibody or in an antibody-drug conjugate.

DEVELOPMENT STAGE
In vivo preclinical proof of concept established; Humanized antibody.

INTELLECTUAL PROPERTY
PCT/US2021/015910
nationalized in US, EP, AU, JP, CA and CN.

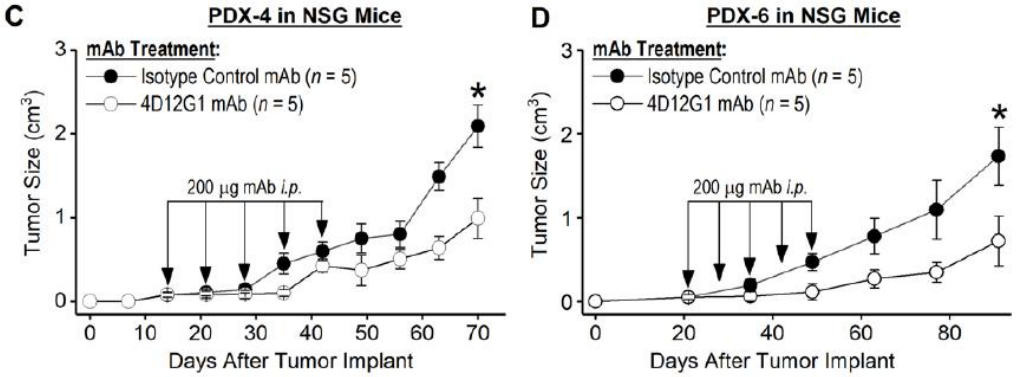
OPPORTUNITY
- Occurring primarily in post-menopausal women, EOC is typically diagnosed at late stages resulting in a high recurrence rate and low five-year overall survival rate.
- The anti-Mullerian hormone receptor II (AMHR2) is expressed in most epithelial ovarian carcinoma (EOC).
- AMHR2 is normally expressed in ovarian tissue but turned off in post-menopausal ovaries.

SOLUTION
- Cleveland Clinic has developed a monoclonal antibody against AMHR2.
- Vaccination against AMHR2-ED has demonstrated inhibition of the growth of murine EOCs through CD4+ T- cells that facilitate B-cells to produce AMHR2-ED-specific IgG.
- A panel for AMHR2-ED was developed to find an antibody that would mimic the clinical effectiveness of the polyclonal IgG response resulting from AMHR2-ED vaccination.
- Treatment with the humanized AMHR2-ED antibody demonstrated apoptosis in EOCs.



Reduction in tumor growth in ovarian PDX models following treatment with AMHR2-ED mAb
